# Access Window

Access windows are used to safely secure the weight of the coiled tubing stack during operations requiring access to the tubing. When used in conjunction with our RH series coiled tubing hangers, you gain the benefits of full bore access allowing the use of oversized downhole tools. It also gives you the ability to clean the slip bowl and tubing before setting the slips, providing the most reliable hang-off possible. An access window also makes it possible to quickly and safely install mid-string tools such as gas lifts.

**HYDRAULIC OR MANUAL**

**ANY HEIGHT OR FLANGE SIZE**

**FULL BORE ACCESS**

- **All API flange sizes**
- **Pressurized and non-pressurized versions**
- **Operating pressures up to 15,000 psi**
