BOP Pull Tester

The WCP BOP Tester is used to test the holding strength of a BOP's slips. It is a hollow spindle double acting hydraulic cylinder that uses WCP's multi-segment slips. The unit is operated by an air powered hydraulic power pack. The power pack is equipped with a digital pressure gauge that data logs the tests, and that information can be transferred to a computer for further review.

DOUBLE ACTING

100,000 LBS OF PULL

DIGITAL RECORDING

- **Pull test BOP slips up to 2 7/8" pipe**
- **Up to 100,000 lbs of pulling force**
- **Air operated hydraulic power pack**
- **Digital recording of the test**
- **Double acting hydraulic cylinder**
